# The AI Citation Check Sheet

Check one citation all the way from the reference to the sentence it's meant to support. Reuse this sheet for your most important sources.

**01** Find the original record. Match the title, authors and publication details. A working link may point to a different paper.

**02** Open the source and read the relevant passage or table. Check the setting, measured outcome and any key limitation.

**03** Record your decision. Keep the claim, narrow it, find stronger evidence, or remove it.

> Hypothetical: A paper measured on-time submissions in one course. That evidence can support a claim about submissions in that course. A claim about higher grades needs different evidence.

**Exact sentence I want to support**

**Verified source and page, section or table**

**Decision and the reason for it**
